

TABLE OF CONTENTS

MATHEMATICAL SYSTEMS THEORY IN BIOLOGY, COMMUNICATION, COMPUTATION, AND FINANCE

Foreword	v
Preface	vii
On cellular automaton approaches to modeling biological cells	1
<i>Mark S. Alber, Maria A. Kiskowski, James A. Glazier, and Yi Jiang</i>	
Crystalline stochastic systems and curvature driven flows	41
<i>Gerard Ben Arous, Allen Tannenbaum, and Ofer Zeitouni</i>	
Overdetermined multidimensional systems: state space and frequency domain methods	63
<i>Joseph A. Ball and Victor Vinnikov</i>	
Dissipative dynamics in classical and quantum conservative systems	121
<i>Anthony M. Bloch</i>	
A state space approach to control of interconnected systems	157
<i>Raffaello D'Andrea, Cedric Langbort, and Ramu Chandra</i>	
Multi-dimensional capacity, pressure and Hausdorff dimension	183
<i>Shmuel Friedland</i>	
Numerics versus control	223
<i>Uwe Helmke and Jens Jordan</i>	
Manipulating matrix inequalities automatically	237
<i>J. William Helton</i>	

A dynamical system approach to matrix eigenvalue algorithms	257
<i>Knut Hüper</i>	
Belief propagation on partially ordered sets	275
<i>Robert J. McEliece and Muhammed Yildirim</i>	
Smoothing by Savitzky-Golay and Legendre filters	301
<i>Per-Olof Persson and Gilbert Strang</i>	
On stochastic control in finance	317
<i>Wolfgang J. Runggaldier</i>	
Control and financial engineering	345
<i>J.M. Schumacher</i>	
Passive and conservative infinite-dimensional impedance and scattering systems (from a personal point of view)	375
<i>Olof J. Staffans</i>	
Spectral theory for neutral delay equations with applications to control and stabilization	415
<i>Sjoerd M. Verduyn Lunel</i>	
On factor graphs and electrical networks	469
<i>Pascal O. Vontobel and Hans-Andrea Loeliger</i>	
Dissipative distributed systems	493
<i>Jan C. Willems and Harish K. Pillai</i>
